# Egg Hunt

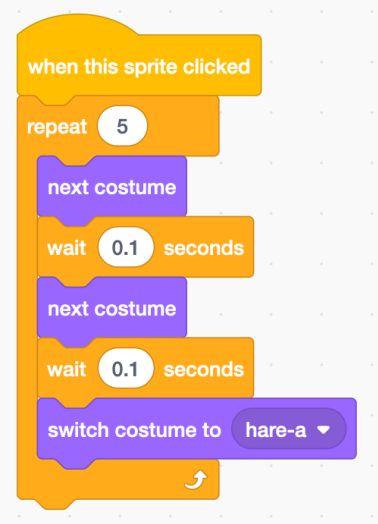
Register/login at https://scratch.mit.edu

*Find the egg hidden by one of the characters.*

1) Add a background for your egg hunt.
2) Create a new sprite for your first character.
3) Choose another costume for this sprite.
   Choose an egg and decorate it.

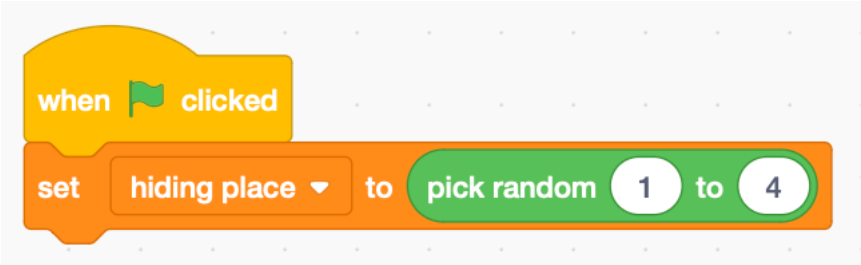
   *Draw patterns around the egg and fill in between.*
   *Use the rubber (eraser) to get the egg shape back.*

4) **When the sprite is clicked**, animate the character by **repeat**edly showing some **costumes** in sequence (not the egg).
5) Add some other characters and copy the egg costume to them by dragging it onto their sprites. Add similar animations when they are clicked.



*Add code to the **stage** that chooses the hiding place.*

6) Make a variable for the **hiding place** and add code that picks a **random** number between 1 and the number of sprites.



**Stage code**

*Add code to **each sprite** that checks if it's the hiding place.*
***Each character must check for a different number**.*

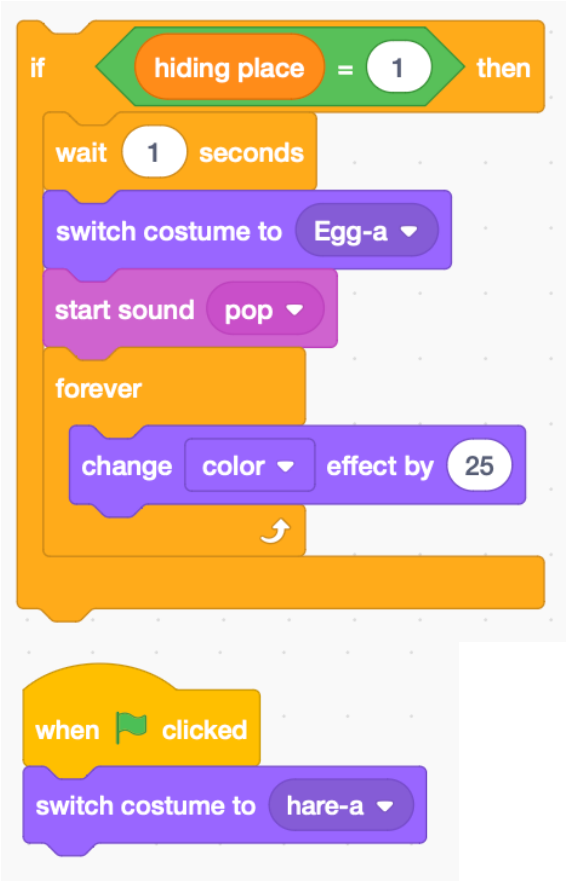
7) **If** the hiding place matches…

8) **Wait** a short time then **switch** to the egg costume with a **sound** effect.

9) Add a looping **colour effect** for fun.

*A new egg hunt is started by clicking on the green flag.*

10) Each sprite **switches** back to its first costume when it starts.



***Save** your code with a good name. **File > Save now***
