Egg Hunt

Register/login at https://scratch.mit.edu

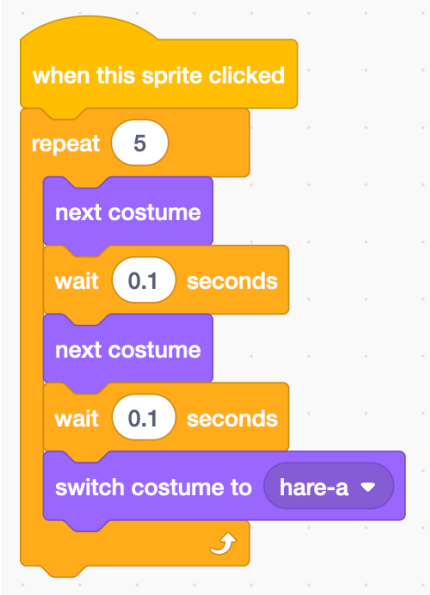
Find the egg hidden by one of the characters.

1) Add a background for your egg hunt.
2) Create a new sprite for your first character.
3) Choose another costume for this sprite.
   Choose an egg and decorate it.

   Draw patterns around the egg and fill in between.
   Use the rubber (eraser) to get the egg shape back.

sprite code

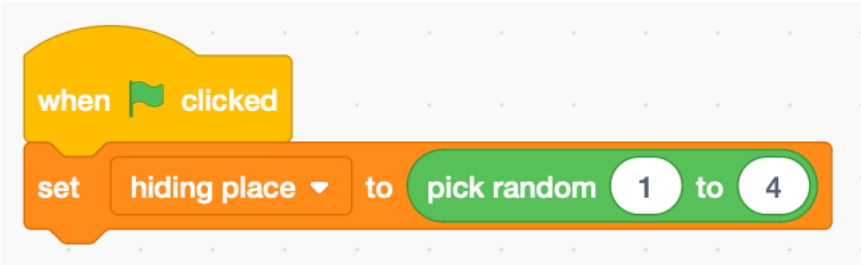
4) Add code (right) so **when the sprite is clicked**, animate the character by **repeat**edly showing some **costumes** in sequence (but not the egg).
5) Add some other characters and copy the egg costume to them by dragging it onto their sprites. Add similar animations when they are clicked.



*Add code to the **stage** that chooses the hiding place.*

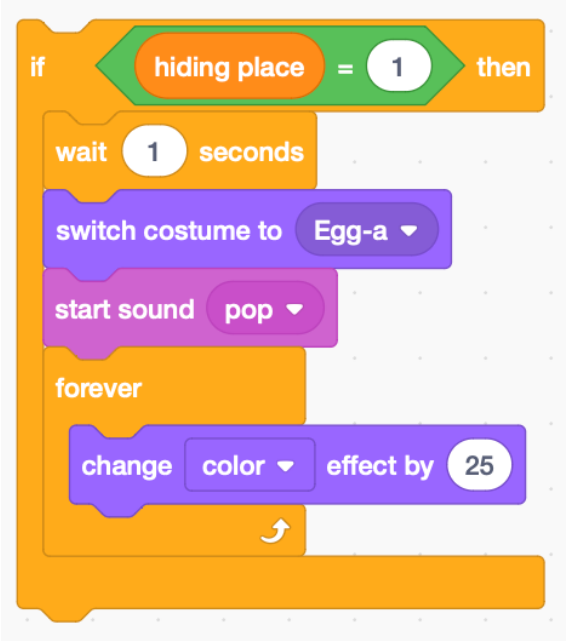
6) Make a variable for the **hiding place** and add code that picks a **random** number between 1 and the number of sprites.

stage code



sprite code

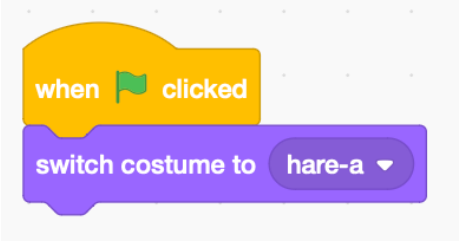
*Add extra code (right) to **each sprite** to check if it's the hiding place. **Each character must check for a different number**.*



7) **If** the hiding place matches…

   Wait a short time then **switch** to the egg costume with a **sound** effect. Add a **colour effect** for fun.

8) Add the code (right) so each sprite **switches** back to its first costume when it starts.



A new egg hunt is started by clicking on the green flag. Click on a sprite to see if it's hiding the egg.

Save** your code with a good name. **File > Save now
