

Christmas Card Creator

MERRY XMAS

AI generates images based on your description.

Open <https://stablediffusionweb.com>¹

1. Click **Free AI Image Generator**
2. **Prompt** the AI with a detailed description of your card.
Be as detailed as possible.
3. Select the **Style** (click on the little triangle). *“cinematic-default” is photo-quality – there are many other styles.*

4. Click **Generate**
This may take a little while...
You can see your place in the queue, and a time estimate.

Free AI Image Generator

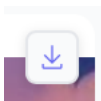

Prompt

Describe your Xmas card here.

cinematic-default

Generate

When it's ready, click the download button at the top-right of the image.

¹ Stable Diffusion was chosen because it has safety filters.

Open <https://codeclub67.github.io>

1. Select the images icon
2. Click on **card-template.docx** to download it.

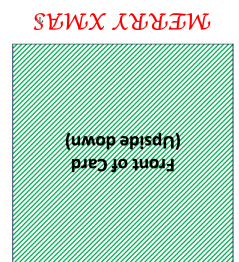

Open the card-template in your Downloads folder.

1. Select the **Insert** tab
2. Click **Pictures** or **Image**, then **Picture/Image from File**
3. Select the image you created and downloaded, then **insert**.
4. Right-click on the image, select **Wrap-Text** or **Wrapping style**, then select **Tight**.

Now you can drag the image around. Make it fit the green square.

1. Drag the photo so the top-left corner aligns with the same corner of the green square.
2. Resize the image by dragging the small white box at the lower-right corner. Make it the same size as the green square.

***"Merry Xmas"** is upside down because the card will be folded. The image has to be upside-down as well.*

1. At the top of the image there's a rotation handle. Press and hold the handle, then drag to rotate the image until it's upside-down.

Finish the card by completing the text:

1. **"Happy Christmas ..."** (who is the card to)
2. **"Love from ..."** (from you)

Now print your card

1. Click on the printer icon to print your card
2. Fold the paper in half **horizontally**, then **vertically**.

Save your card on your USB drive.
