*In this project we're looking at making **sounds** in Scratch. It can make sounds when you click on a sprite.*

1) **Create** a new Project.

2) In the **Sprite** section, **choose a sprite**. Look in Fantasy characters and add Skeleton and Ghost.

3) Add a spooky fantasy backdrop.

4) Select the Skeleton. Add a block to **make a sound when this sprite clicked**.

5) Open the **Sounds** tab. Skeleton has a rattle sound. Add a block to **start sound** when it's clicked.

Try clicking on the Skeleton.
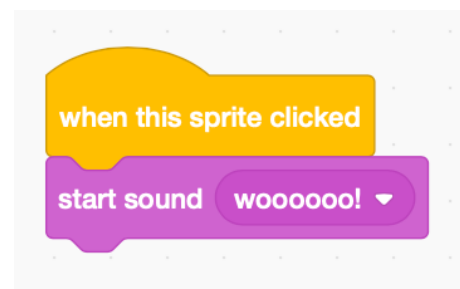

What sound does a ghost make?
*Make a recording.*

6) Select the Ghost and open the **Sounds** tab.

7) **Record** your ghost sound. You can add a name to your recording.

8) Add code to **start sound** when this sprite is clicked, and select your recording.

```
when this sprite clicked
start sound  wooooooo! ▼
```

9) Change the pitch of the sound to make it sound even more spooky. A positive number speeds it up, and a negative number slows it down.

```
when this sprite clicked
set  pitch ▼  effect to  200
start sound  woooooo! ▼
```

Are there other spooky characters you can add?

Save *your code with a good name.*
