*Make **sounds** in Scratch when you click on a sprite.*

1) **Create** a new Project.

2) In the **Sprite** section, **choose a sprite**. Look in Fantasy characters and add Skeleton and Ghost.

3) Add a spooky fantasy backdrop.

4) Select the Skeleton. Open the **Sounds** tab. Skeleton has a rattle sound you can play.

5) Add a block to **start a sound when this sprite clicked**.
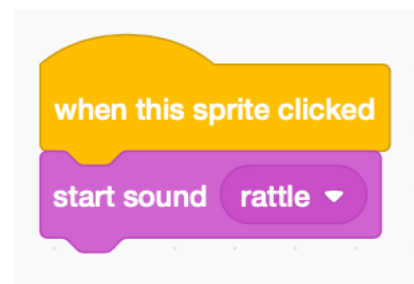

Try clicking on the Skeleton.

*What sound does a ghost make?*
*Make a recording.*

6) Select the Ghost and open the **Sounds** tab.

7) **Record** your ghost sound. You can add a name to your recording.

8) Add code to **start sound when this sprite is clicked**, and select your recording.

9) Change the pitch of the sound to make it sound even more spooky. **Set pitch** to a positive number to speed it up, or a negative number to slow it down.

Are there other spooky characters you can add?

Save *your code with a good name.*
